1. sonar-pdf-report

This chapter presents an overview of the project measures. This dashboard shows the most important measures related to project quality, and it provides a good starting point for identifying problems in source code.

1.1. Quality Profiles

Profiles

Profile name	Language	Number of active rules
Sonar way	Azure Resource Manager	31
Sonar way	CloudFormation	26
Sonar way	C#	324
Sonar way	CSS	27
Sonar way	Docker	25
Sonar way	Flex	47
Sonar way	Go	22
Sonar way	IPython Notebooks	323
Sonar way	Java	549
Sonar way	JavaScript	384
Sonar way	JSON	0
Sonar way	JSP	0
Sonar way	Kotlin	130
Sonar way	Kubernetes	23
Sonar way	PHP	178
Sonar way	PL/SQL (ZPA)	49
Postgres SQL Rules	PostgreSQL	24
Sonar way	Python	327
Sonar way	Ruby	29
Sonar way	Rust	78
Sonar way	Scala	30
Sonar way	Secrets	30
Sonar way	Terraform	48
Sonar way	Text	3
Sonar way	TypeScript	397
Sonar way	VB.NET	142
Sonar way	HTML	53
Sonar way	XML	25
Sonar way	YAML	0

1.2. Quality gate

Project status

Project status	Passed

1.3. Metric dashboard

Leak Period : Comparison with the previous version

Reliability

29	0	C
Number of bugs	New bugs	Reliability rating

Total remediation effort	4h 10min
New remediation effort	0min

Security

0	0	A
Vulnerabilities	New vulnerabilities	Security rating

Total remediation effort	0min
New remediation effort	0min

Maintainability

168	0	A

	2d 2h 30min
	0min
	0.8%
	0.0%
	0min

Code Coverage

Line coverage	0.0%
Branch coverage	null%
Uncovered lines	2531
Uncovered conditions	
Lines to cover	2531

Code Duplication

1.1%
Duplicated lines density

Duplicated blocks	2
Duplicated lines	70
Duplicated files	2

Size

4519
Number of lines of code

Lines	6136
Statements	1924
Functions	396
Classes	51
Files	52
Directories	

Code complexity

612
Code complexity

Function complexity	
File complexity	
Class complexity	

Documentation

7.9%
Comment lines density

Number of comment lines	385

Issues

197	0
Violations	New violations

Open issues	197
Reopened issues	0
Confirmed issues	0
False positive issues	0
Won't fix issues	0

1.4. Issues Analysis

Most violated rules

SEVERITY : ALL

Rule name	Language	Rule count
Sections of code should not be commented out	Java	29
Optional value should only be accessed after calling isPresent()	Java	19
Exceptions in "throws" clauses should not be superfluous	Java	14
Utility classes should not have public constructors	Java	11
Strings and Boxed types should be compared using "equals()"	Java	9
Format strings should be used correctly	Java	8
Local variables should not shadow class fields	Java	7
"Stream.toList()" method should be used instead of "collectors" when unmodifiable list needed	Java	7
"Preconditions" and logging arguments should not require evaluation	Java	7
The diamond operator ("<>") should be used	Java	6

SEVERITY : INFO

Rule name	Language	Rule count
Track uses of "TODO" tags	Java	2

SEVERITY : MINOR

Rule name	Language	Rule count
Exceptions in "throws" clauses should not be superfluous	Java	14
The diamond operator ("<>") should be used	Java	6
"Collection.isEmpty()" should be used to test for emptiness	Java	6
Unnecessary imports should be removed	Java	4
Local variable and method parameter names should comply with a naming convention	Java	4
Strings should not be concatenated using '+' in a loop	Java	4
Catches should be combined	Java	3
Loggers should be named for their enclosing classes	Java	3
"@Deprecated" code should not be used	Java	3
Local variables should not be declared and then immediately returned or thrown	Java	2

SEVERITY : MAJOR

Rule name	Language	Rule count
Sections of code should not be commented out	Java	29
Optional value should only be accessed after calling isPresent()	Java	19
Utility classes should not have public constructors	Java	11
Strings and Boxed types should be compared using "equals()"	Java	9
Format strings should be used correctly	Java	8
Local variables should not shadow class fields	Java	7
"Stream.toList()" method should be used instead of "collectors" when unmodifiable list needed	Java	7
"Preconditions" and logging arguments should not require evaluation	Java	7
Methods should not have too many parameters	Java	6
"@Deprecated" code marked for removal should never be used	Java	4

SEVERITY : CRITICAL

Rule name	Language	Rule count
"static" base class members should not be accessed via derived types	Java	6
String literals should not be duplicated	Java	4
Cognitive Complexity of methods should not be too high	Java	2
Methods should not be empty	Java	2
Instance methods should not write to "static" fields	Java	1
"String#replace" should be preferred to "String#replaceAll"	Java	1

SEVERITY : BLOCKER

No violated rules of Severity BLOCKER

Most violated files

Filename	ExecutivePDFReporter.java
File path	
Number of violations	55

Most complex files

Filename	ExecutivePDFReporter.java
File path	src/main/java/com/cybage/sonar/report/pdf/ExecutivePDFReporter.java
File complexity	126

Filename	Project.java
File path	src/main/java/com/cybage/sonar/report/pdf/entity/Project.java
File complexity	43

Filename	MeasuresBuilder.java
File path	src/main/java/com/cybage/sonar/report/pdf/builder/MeasuresBuilder.java
File complexity	29
